

Dollhouse Ray Ray

momoll, 2006

The collapsible dollhouse is a modern interpretation of a toy classic. This contemporary chalet convinces with inviting simplicity and generous size. The roof opens up (and hides a secret chamber) and is attached to the main structure with an elastic string. Dissassembled, it can be stored in a small bag or easily transported to the weekend house, the grandparents or friends. The modern, modular design is easily assembled (and disassembled), solid and well crafted.

Materials: multilayer birch plywood, water-based finish;
different roof colors
